

SKILLS

Engines & Frameworks

Unreal Engine (UMG, Slate, MVVM),
Unity, Frostbite

Programming

C++, Python, Blueprint, C#

Technical Art

UI materials & shaders, HUD systems,
performance profiling (PIX), MVVM,
animation optimization

Tools & Pipeline

Editor tooling, static analysis,
automated testing (pytest), CLI
validation, documentation systems

Design Software

Figma, Photoshop, Illustrator, After
Effects

Workflow

Perforce, Git, Jira, Confluence, Agile

PROJECTS

UIAB — UI Asset Builder

Unity Asset Store · 2024

Relative Layout for Unity

Unity Asset Store · 2021

Easy UI Animator

Unity Asset Store · 2017

EDUCATION

Master's in Digital Media

University of British Columbia
2018 – 2019

Bachelor's in Computer Engineering

Federal University of Amazonas
2011 – 2017

LANGUAGES

English · Portuguese · Spanish

PROFILE

Technical UI Designer bridging engineering, design, and art with 6+ years shipping AAA titles at Halo Studios and Electronic Arts. Specialist in Unreal Engine UI systems, reusable HUD architecture, tools, and performance. Recognized for rapid high-quality execution, systems thinking, and translating artistic goals into maintainable technical solutions.

EXPERIENCE

Senior Technical Designer · Halo Studios

Aug 2026 – Oct 2026

Halo: Campaign Evolved · Unreal Engine · UI systems, tools, HUD, Frontend

- Helped rapidly prototype a new unannounced **PvE gameplay mode**, taking a full new game experience from concept to a shippable-quality state in roughly two months.
- Took ownership of the mode's **HUD end-to-end**, partnering with multiple engineers and designers to align systems, feedback loops, and player-facing presentation.
- Proactively surfaced UX and technical improvements, driving **quick prototypes** to validate strategies and iterating fast on cross-discipline feedback.

Technical Designer 2 · Halo Studios

Dec 2024 – Jul 2026

Halo: Campaign Evolved · Unreal Engine · UI systems, tools, HUD, Frontend

- Designed and drove a reusable gameplay **Reticle and Zoom system** in Unreal Engine — 10+ texture-free, accessibility-friendly reticles (outline, transparency, and color settings) and a textured zoom widget — architected specifically for cross-project reuse and later adopted by a second project with only event-level adaptations.
- Joined a late-stage AAA initiative and rapidly delivered broad **Frontend, HUD, settings, localization, and accessibility improvements** that management credited with supporting a successful public demo.
- Built an Unreal Widget Blueprint **static-analysis linter** with 27 rules and 135 automated tests, translating patterns from 100+ historical defects into Editor and CLI validation adopted across the entire UI team.
- Designed and executed controlled 4K PIX studies of Unreal HUD effects, delivering an approximately **27% render-time reduction** for one tested configuration and a **10% memory-footprint reduction** via targeted compression methods.
- Led a **five-session Unreal UI training series** and authored workflow/onboarding documentation adopted by external partners and by a Technical Artist supporting another project.
- Created 40+ reusable **UI material functions** — SDF shapes, UV transformations, and widget-specific specializations — powering reticles, zoom overlays, HUD elements, and cross-project assets.

Technical UI Designer · Electronic Arts

2021 – 2024

FIFA 22, FIFA 23, EA FC 24, EA FC 25 · Frostbite Engine

- Designed and implemented a **UI widget library** in Frostbite's visual scripting system, adopted across four annual releases; authored and maintained the supporting documentation.
- Optimized animation and game assets for performance-sensitive platforms, including Nintendo Switch, without compromising visual quality.
- Communicated technical requirements and constraints across cross-functional teams (design, engineering, art) to keep feature execution aligned and on schedule.
- Partnered with designers on arena creation and built internal tools for debugging and asset authoring.

Lead Technical Game Designer · Truly Social Games

2020 – 2021

Archer: Danger Phone · Unity, mobile

- Applied optimization techniques to 3D assets to improve mobile game performance without compromising visual quality.
- Broke down features into defined structures, components, and processes aligned with the game's vision and requirements.

Software Engineer · Truly Social Games

2019 – 2020

Archer: Danger Phone · Unity, mobile

- Collaborated with engineers to develop tools and workflows supporting the art team's authoring needs.
- Contributed in an Agile cadence — sprint planning, stand-ups, retrospectives — to deliver features on a regular schedule.
